CC93 RBC CAM FOLLOWERS

Belvac announces RBC cam followers have become standard on CC93 Trimmer machine platforms. These machine platforms have used only McGill cam followers for a number of years in both push and tooling rams. In response to customer inquiries, Belvac has evaluated RBC followers as an alternate for use on trimming equipment and determined that followers offered by RBC are successful in CC93 Trimmer cartridge assembly applications

All trimmers issued by Belvac Standard Product Engineering after July 15th, 2021 will utilize RBC cam followers. Some important details regarding the change:

- Belvac part number C101028 will be used for RBC cam followers and will make McGill cam followers (12159-CC93) obsolete.

Cam followers are physically marked with vendor name for clarity
