## STAINLESS REFLECTORS

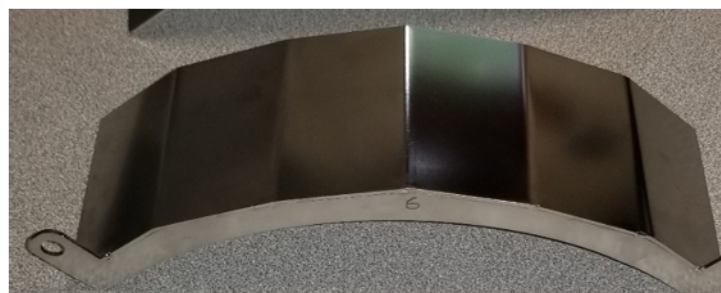

For a number of years Belvac has provided Light Tester turrets utilizing LED lighting providing efficient and effective leak testing in Necker systems. Through continuous improvement, the system capabilities of the most recent BV40 series Light Testers have established a benchmark far exceeding industry accepted minimum standards.

Testing has conclusively proven the BV40 series Light Tester provides an opportunity to replace the copper plated reflectors typically associated with Light Testers with a more robust stainless steel version.

Stainless steel reflectors will be more resistant to deformation during can jams, less susceptible to scratching and oxidation, and still provide leak detection exceeding minimum standards by 300% or more.

Stainless steel reflectors will be standard on all Belvac Light Tester turrets shipped after October 01, 2018.
